## Tuition Management System User Manual

### 1. Introduction:

Tuition management system is a software where students find their private tutor and teachers find students for tuition.

This software is built in the Python language and uses Python Tkinter.

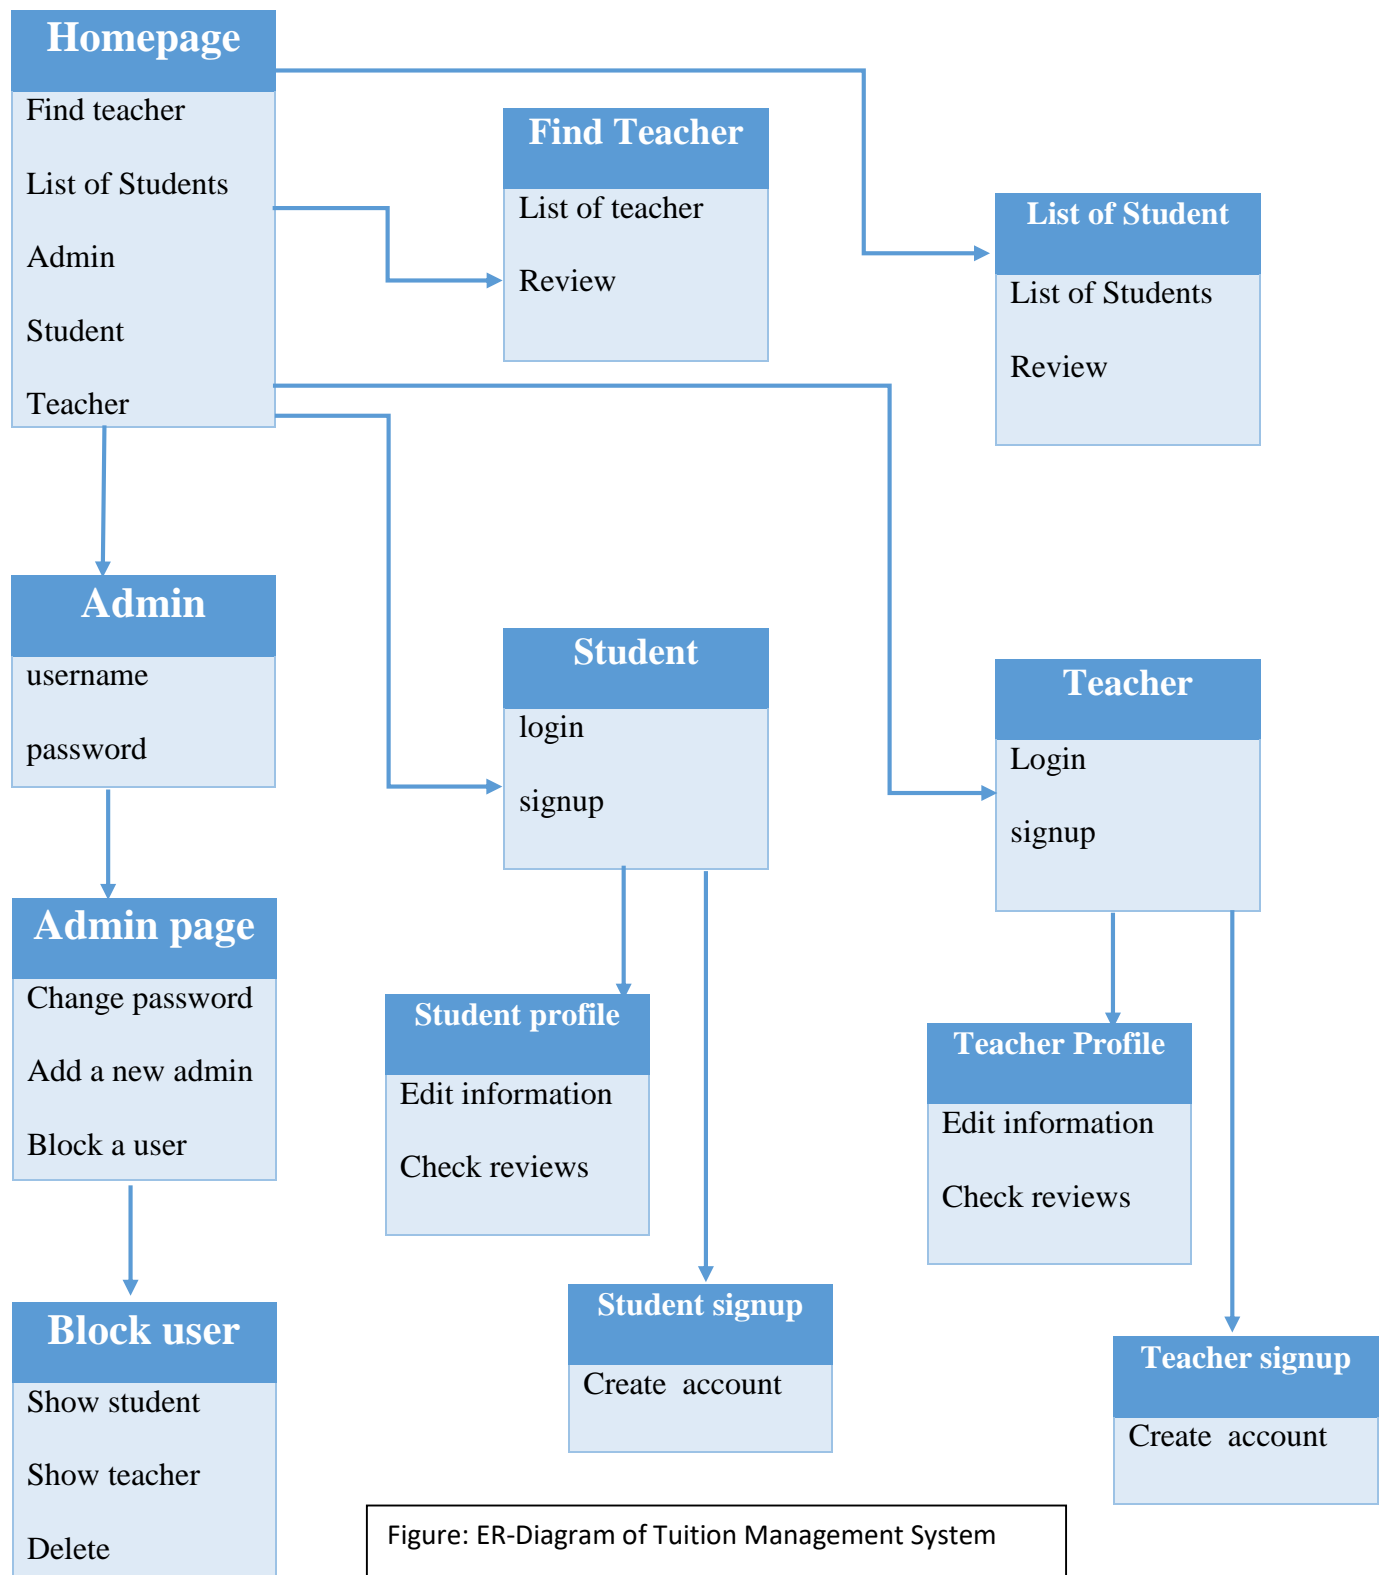

It helps both the students and teachers to find desirable tuition. In this software, students choose their teacher. After taking lessons, they can rate their teacher. So, other students can learn about a teacher before fixing for his private tutor.

We hope this software will help many students and teachers a lot to find their tuition.

### 2. Objectives

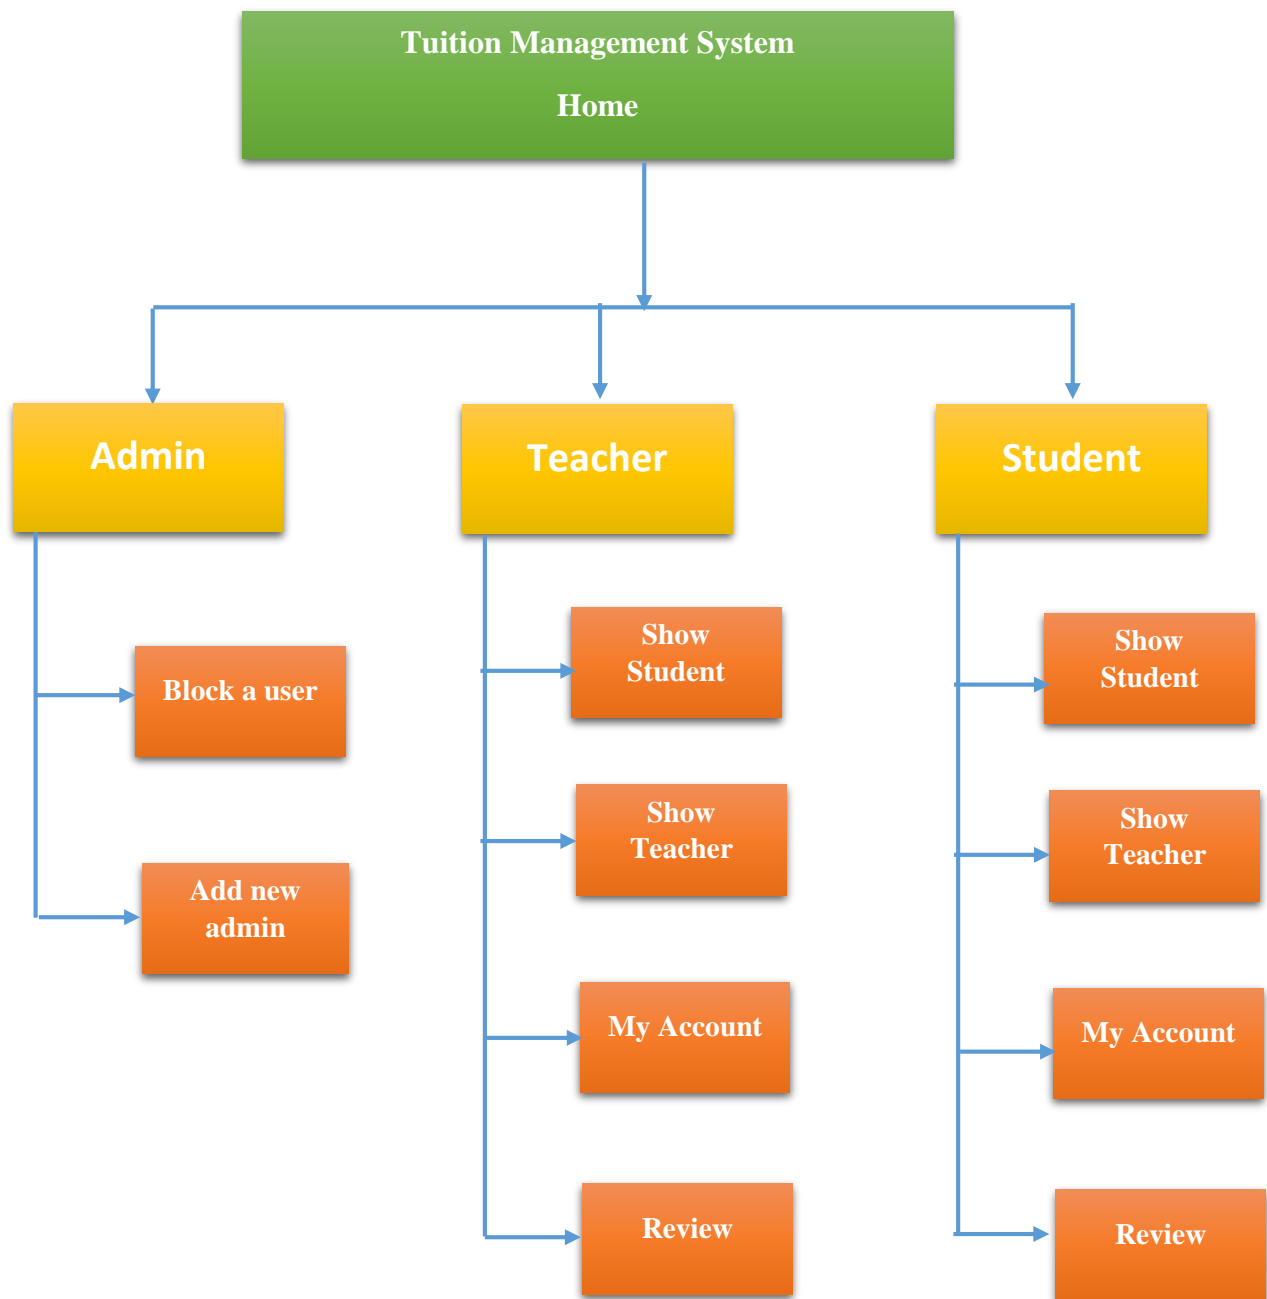

- Eliminate the difficulties to find a teacher and advertise as a teacher.
- Simplify search or find of teacher and student list.
- Review facilities to know the student and teacher better.
- Build Digital Tuition Management interface.
- Contain block system to block a user for bad reviews.
- Managing multiple users in their specific user profile.
- Finding private teacher facilities simply.
- Store student and teachers data to show or advertise others.

### 3. Entity Relationship Diagram

#### 4. Site Tree

In the Tuition Management System, there are three characters. Admin, Teacher and Student. Each has a unique view and their own functionalities. A simple site tree can show what this character can view.

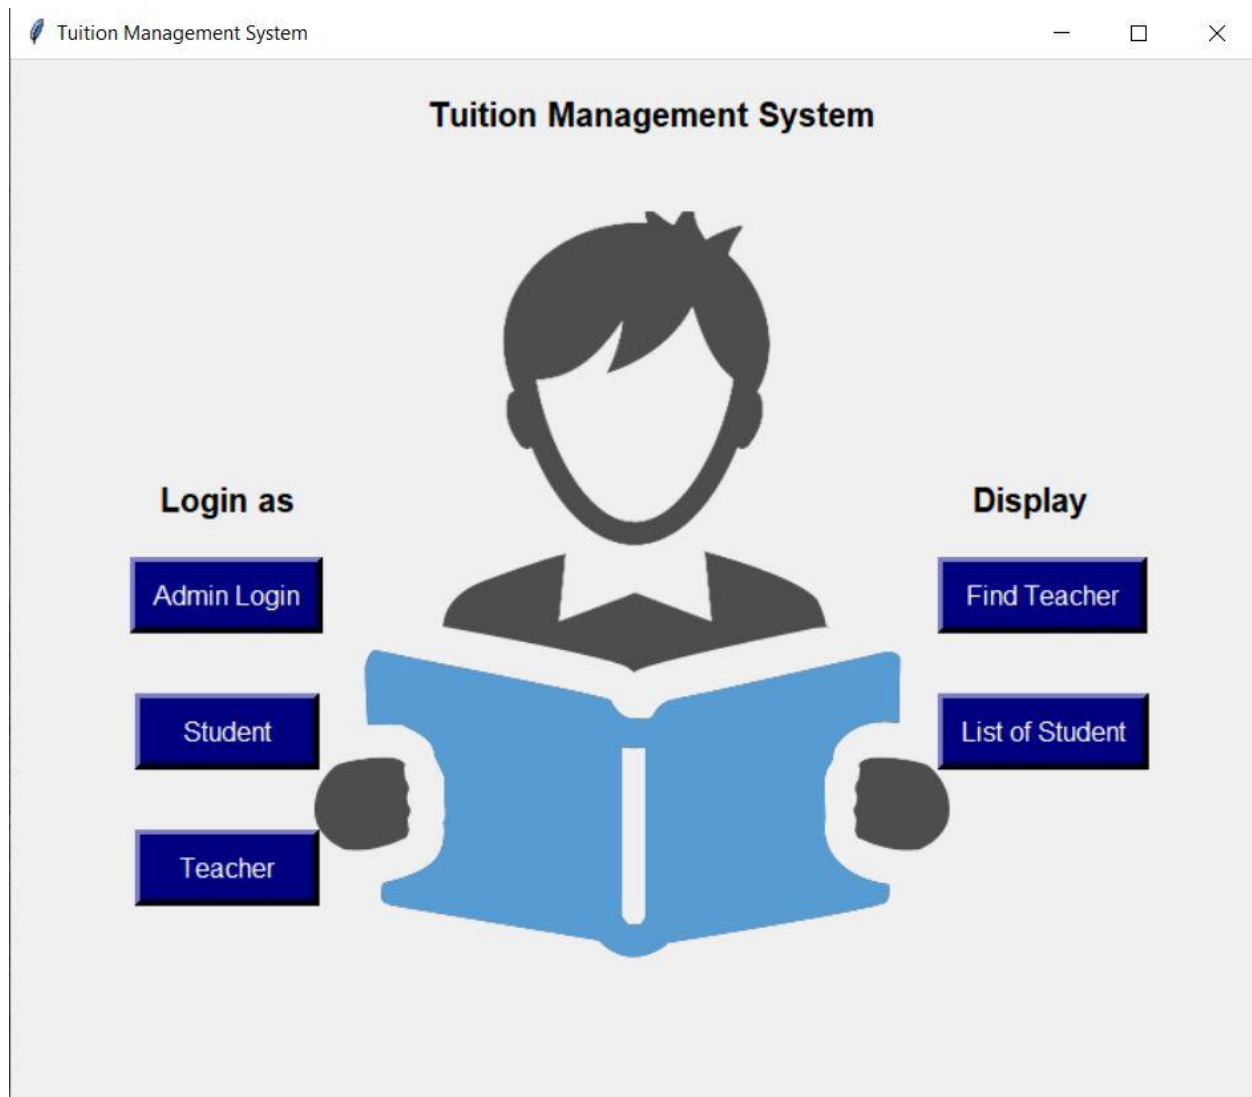

Here we can see each character has his own functions. Below all these functions are described according to their presence.

## 5. Description

### **Homepage**

After run the software every user or admin can see the homepage.

Automation system as follow.

In this page, every user can go any option. If one can see student/teacher list then click student/teacher button. If want too login then click admin login or student or teacher button.
